1. Introduction

The Ahadu Bank Attendance Management module is a comprehensive attendance tracking and workforce management solution built on Odoo 18. It is designed specifically for Ahadu Bank's operations and provides enterprise-grade features for managing employee attendance across the entire organization.

Key features include:

- **Multi-method attendance tracking:** Track attendance via Biometric, PC, Mobile, Card, or Manual entry.
- **Automated status analysis:** Lateness, early-out, and miss-out detection with configurable tolerance.
- **Shift management:** Create shift types, assign schedules in bulk, and manage swap requests.
- **Overtime management:** Policy-driven overtime calculation with multi-level approval workflows.
- **Attendance sheets:** Periodic attendance summaries with manager approval workflow.
- **BioTime / ZKTeco integration:** Sync attendance data from ZKTeco biometric devices via database connection.
- **Custom reports:** Advanced Excel report wizard with multiple report types and ranking.
- **Disciplinary notes:** Automated warnings for repeated lateness or unauthorized absence.
- **Leave integration:** Automatically detects approved leave and marks attendance accordingly.

IMPORTANT:

This module depends on `hr`, `ahadu_hr`, `hr_attendance`, `hr_holidays`, `payroll`, and `resource`. All dependencies must be installed before activating this module.

2. User Roles & Access Levels

The module defines three security groups under the Ahadu Bank HR category:

Role	Group Name	Access Level
Employee	Ahadu / Employee	View own attendance records, submit overtime requests, shift swap requests, and on-duty requests.
Manager	Ahadu / Manager	Everything an Employee can do, plus: approve/reject team requests, view team attendance, manage sheets, and access Activities menu. Inherits HR Manager rights.
HR Administrator	HR Administrator	Full access to all features — configuration, policies, BioTime sync, reports, and disciplinary notes.

How to Assign Roles

1. Go to Settings → Users & Companies → Users.
2. Select the user.
3. Scroll to the Ahadu Bank HR section.
4. Select the appropriate role: Ahadu / Employee, Ahadu / Manager, or HR Administrator.
5. Click Save.

3. Getting Started — Navigation

After installation, the module appears under the Attendances application in the top menu bar. The main menu structure is organized as follows:

◇ Attendances

└ Dashboard

└ Activities

- └ My Attendance
- └ Attendance Policies (Manager only)
- └ Policy Allocations (Manager only)
- └ Attendance Sheets (Manager only)
- └ Lateness Reasons (Manager only)
- └ Disciplinary Notes (Manager only)
- └ Overtime Policies (Manager only)
- └ Unplanned Absences (Manager only)

└ My Requests

- └ Overtime Requests
- └ On Duty Requests
- └ Shift Swap Requests

└  Custom Reports (Manager only)

- └ Advanced Attendance Report

└ User Manual

└  Configuration (Manager only)

- └ Shift Types
- └ Shift Schedule
- └ Mass Shift Schedule

4. Dashboard

Menu: Attendances → Dashboard

The Dashboard provides a visual overview of attendance data using interactive charts and KPI cards. It displays real-time metrics including:

- **Total Present / Absent Today:** Count and percentage of employees present today.
- **Attendance Trends:** Charts showing check-in patterns over days and weeks.
- **Department Breakdown:** Distribution of attendance metrics across departments.
- **Late Arrivals Today:** Number of late arrivals and trend over time.

5. My Attendance (Check-In / Check-Out)

Menu: Attendances → Activities → My Attendance

5.1 Checking In

1. Navigate to My Attendance. 2. If you have no open attendance record, the system creates a new Check-In with the current timestamp. 3. The Check-in Method is recorded automatically (Biometric, PC, Mobile, Card, or Manual).

5.2 Checking Out

1. Navigate to My Attendance while you have an open attendance record. 2. The system records your Check-Out time. 3. Worked Hours are calculated automatically: $\text{Worked Hours} = (\text{Check-Out} - \text{Check-In}) - 1 \text{ hour lunch deduction (if total presence} \geq 5 \text{ hours)}$.

5.3 Miss-Out Handling

If an employee forgets to check out: The system detects the "stuck" check-in when the employee checks in the next day. The previous attendance is automatically marked with status Miss-Out. A new check-in record is created for the current day. For miss-out records, Worked Hours = 0.

i NOTE:

Miss-out detection also runs via a scheduled action. If a check-in has no check-out and the current time is more than 3 hours past the expected shift end, it is flagged as miss-out.

6. Attendance Records — Status & Analysis

Status	Condition
On-Time	Check-in within grace period, check-out after expected end.
Late-In	Check-in after the grace period (default: 15 min past start).
Early-Out	Check-out more than 5 minutes before scheduled end.
Miss-Out	No check-out recorded, or auto-closed by system.
Late-In & Early-Out	Both late arrival and early departure.

6.2 Schedule Priority

The system determines expected work hours using: 1. Assigned Shift (highest priority) 2. Attendance Policy 3. Employee's Working Hours 4. Fallback (8-5 Mon-Fri, 8-12 Sat).

7. Lunch Tracking

7.1 Recording Lunch Out

Open record and click Lunch Out. Allowed from 12:00 PM onwards, before 7:00 PM.

7.2 Recording Lunch In

Allowed from 12:00 PM to 1:10 PM. Lunch Out must be recorded first.

TIP:

The 1-hour lunch deduction is automatic for full shifts regardless of recording.

8. Shift Management

8.1 Shift Types

Menu: Attendances → Configuration → Shift Types. Defines shifts like "Morning Shift" linked to resource calendars.

8.2 Shift Schedule

Menu: Attendances → Configuration → Shift Schedule. Assigns shifts to employees for specific dates.

8.3 Mass Shift Schedule Wizard

Assign shifts to multiple employees at once. Updates employee contract calendars automatically.

8.4 Shift Swap Requests

Employees can request to swap shifts. Requires manager approval. Shifts are swapped automatically on approval.

9. Overtime Management

9.1 Overtime Policies

Defines rate multipliers (e.g., 1.5x, 2.0x) based on day type (Weekday, Sunday, etc.).

9.2 Overtime Requests

System auto-calculates worked vs scheduled hours. Workflow: Draft → To Approve → Approved/Rejected.

10. On Duty Requests

Used for off-site work. Approved requests prevent employees from being flagged as absent.

11. Attendance Policies & Allocations

Defines check-in/out rules and grace periods. Allocations assign these to departments or employees in bulk.

12. Attendance Sheets

Periodic summaries (e.g., monthly) for validation and approval before payroll processing.

13. Unplanned Absences

System auto-detects absences daily if no record, leave, or duty request is found. Manager can confirm or excuse.

14. Lateness Reasons & Disciplinary Notes

Tracks reasons for lateness. Auto-generates notes for repeated lateness (3+ times in 7 days).

15. Custom Reports

Advanced wizard for generating Excel reports with ranking, filters, and department-wise exports.

16. BioTime / ZKTeco Integration

Direct database sync from BioTime devices. Auto-calculates first-in/last-out punches.

17. Leave Integration

Syncs with Time Off module. Marks attendance as "On Leave" with status codes (e.g., AL, SL).

18. Appendix — Glossary

Worked Hours = Presence - 1h lunch. Miss-Out = Missing check-out. Rate Multiplier = 1.5x standard for OT.
